PAUL ONSONGO

00100, Nairobi, Kenya | +254112609745 | paulmichira03@gmail.com

PROFILE

Computer Security and Forensics student (currently awaiting graduation in December 2026) at Kabarak University with 1 year of experience in security operations, threat monitoring and incident response and security operation tools in a large-scale enterprise environment. I previously worked as an Information security specialist at Kenya Revenue Authority (KRA) where I contributed to penetration testing, real-time monitoring, alert triage and incident escalation. I have also worked on successful projects like Controlled Financial User Access System and File Integrity Checker. I am analytical, calm under pressure and committed to staying ahead of emerging threats, qualities I bring to every security operations environment.

WORK EXPERIENCE

6/01/2026 – 31/03/2026 **Cyber Security Analyst**

Kenya Revenue Authority

- Real-time monitoring of security tools and systems for suspicious activity.
- Manage and maintain SIEM and EDR tools for full organizational visibility.
- Penetration testing, vulnerability management and Report writing.
- Triage and investigative alerts, separating genuine threats from false positives.
- Privilege and Identity Access management.

CORE SKILLS

- Penetration testing and vulnerability management.
- Security tools, IT assets management and configuration.
- Network security and maintenance.
- Web development and system administration.

EDUCATION

09/09/2022 – 19/12/2026 **BACHELOR OF SCIENCE IN COMPUTER SECURITY AND FORENSICS**

Kabarak University

CERTIFICATIONS

- **Ethical Hacker –** Cisco Networking Academy

PROJECTS

Controlled Financial User Access system

- Developed a web-based financial data access control system implementing Role-Based Access Control (RBAC) to manage permissions for administrators, accountants, auditors, and viewers.
- Implemented audit logging to support accountability, activity monitoring, and traceability of user actions involving sensitive financial data.
- **Technologies:** Python, Flask, MongoDB, HTML, CSS, JavaScript.

Rate-Limiting Middleware

- Developed reusable middleware to control API request rates and help protect web applications against excessive requests and potential abuse.
- Implemented fixed-window and token-bucket rate-limiting approaches to regulate incoming requests.
- Created automated tests to validate request limits, rejection behaviour and rate-limit window resets.
- **Technologies:** Python, Flask, Middleware, Pytest, REST APIs.

File Integrity Checker

- Developed a security utility to verify file integrity by calculating and comparing cryptographic hashes to identify unexpected file modifications.
- Applied hashing concepts to support file tampering detection and basic integrity monitoring.
- **Technologies:** Python, Cryptographic Hashing, File Handling.

Machine Learning Project

- Developed a machine learning project involving data preparation, feature analysis, and model training to explore predictive analytics.
- Applied data analysis and model evaluation techniques to assess model performance.
- **Technologies:** Python, Pandas, NumPy, Scikit-learn
